DETAILED ACTION

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1-9 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. The exact structure of the claimed device is not clearly defined. In claim 1, the inventive structure is not clear as to the relative dimensions of the N and P type transistors in each of the inverters of the invention. The recitation that the second transistor has a gate width larger than the first transistor does not clearly define just where the inventive improvement actually lies.

In addition, the recitation in claim 3 that the gate width of the first transistor is set so that a change in the edge flank is slowed down, is vague as to the actual structure of this transistor.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

Claims 1-9 are further rejected, insofar as understood, under 35 U.S.C. 102(a) as being anticipated by applicant's admitted prior art, as described in Fig. 7. The basic structure of the claimed circuit device, including clock buffer circuits with inverters that comprise first and second transistors, is shown in prior art FIG. 7. In addition, the prior art also utilizes transistors where the gate width of the second transistor differs from that of the first transistor, and where the P-channel transistor in the first-stage inverter has a gate width larger than the N-channel transistor.

Art Unit: 2815

Insofar as the claims are understood, it appears that the prior art structure would meet the claim limitations.
